

1

Overview

1.0 Introduction

The building blocks for the UniGuide Program consist of six graphic components: typography, grid formats, Arrowhead symbol, directional arrow graphics, recreation symbols, and color. These components are used in specific ways to visually enhance particular types of communications consistently throughout the National Park System. This chapter provides specific guidelines on graphic standards for Roadway Signs.

Typography

2.0 Introduction

The Uniguide Standards specify three typefaces for sign legends: NPS Rawlinson (a serif font), and Frutiger and Clearview (both sans serif fonts).

NPS Roadway (designed specifically for the National Park Service) is the primary typeface used on Roadway Signs.

Frutiger (used under license from Adobe), replaces the Helvetica formerly used in many NPS media. Along with Rawlinson, Frutiger is used as a secondary typeface on VIS Signs and Park and Facility Identification Signs.

Clearview (which was created by the same firm that designed NPS Rawlinson) is used as a secondary typeface on all Roadway Signs and on those VIS (see Volume 3, Uniguide Standards) Signs that provide information to motorists. Clearview is similar to Frutiger in appearance, but — unlike Frutiger — is approved by the Federal Highway Administration for use on roadways.

NPS Roadway

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz0123456789

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz0123456789

Frutiger 65

ABCDEFGHIJKLMNOPQRSTUVWXYZ

abcdefghijklmnopqrstuvwxyz0123456789

2.1 Specifications and Compliance

Only these fonts are to be used on Roadway Signs. **Alternates — such as Helvetica, Century, Times Roman, or Clarendon — are not acceptable.**

Specified typefaces are to be used in the production of all graphic panels. Conversions that change the typographic style, letterspacing, alignment, stroke-width, or size will be rejected.

2.2 Method of Typographic Display

All legends are displayed in NPS Roadway, in upper and lowercase (U/lc), with initial capital letters only unless otherwise noted. Advance Guidance Legends are displayed in Clearview, in uppercase (UC).

2.3 Letterspace Adjustment for Legibility

Signs viewed from a distance require more space between letters (additional tracking) than those viewed by pedestrians from a standing position. Computer software programs provide precise adjustments for such tracking needs. Within the UniGuide program, custom tracking of legends is limited.

NPS Roadway and Clearview have the correct proportional letterspacing built into the font for Roadway Sign applications. The numerical value of the specified tracking is identified with the individual grid specifications.

2.4 Typographic Alignment

Destination legends are placed flush left (left justified) on the grid with initial letter aligned to the left side of a vertical stroke unless specified as centered on the layout grid.

Alignment: Initial capital letters align on the leading edge of the vertical stroke. Round and angular letters are placed slightly to the left as shown so as to appear aligned flush left on the grid.

Vertical alignment: The serif is allowed to extend beyond the edge of the grid. Letters including Y, W, A, etc. are aligned inside the serif at the location where the body of the actual letter begins as shown in the diagram on the left.

Horizontal alignment: The distance between the baseline of a line of type and the imaginary line across the top of capital letters becomes the dimension on which interline spacing is based.

3

NPS Arrowhead

3.0 Introduction

Since its introduction in 1952, the NPS Arrowhead logo has become a well recognized symbol of the agency. Changes to the logo, adopted in 2001, helped to ensure that the Arrowhead appears more often, more consistently, and more legibly on all NPS communication materials, including signs. The UniGuide Sign Standards prescribe the use of the NPS Arrowhead on selected Park and Facility Identification signs, and on specified Roadway Signs, including Pathfinders.

Information about the NPS Arrowhead is available online at <www.graphics.nps.gov>.

The two Arrowheads required for use on signs have been optimized for a variety of imaging technologies and for distant viewing.

The Arrowhead Symbol is to be considered all inclusive. The Arrowhead should not be altered or redrawn, nor should any element within the Arrowhead be removed, replaced, or modified.

The decision of when and how to use the NPS Arrowhead logo on signs should be made with care. Although the Arrowhead is an integral part of the agency's public identity, it should not be overused. The Arrowhead should also not be used in ways that compromise a sign's primary purpose. Highway Guide Signs may use an Arrowhead. However, this application may be subject to restrictions by State Highway Administrations. If a sign is obviously within a park, greater liberty may be taken in the use, size, or placement of the Arrowhead.

3.1 Arrowhead Applications

Highway Guide Signs display the Arrowhead on the left side of the legend at a size specified on the layout grid (HG.2). Highway Guide Signs are used outside the park to direct visitors to its entrance(s). The MUTCD allows the use of the NPS Arrowhead on Highway Guide Signs but its use on state highway signs may vary from state to state and within the individual highway districts in a state. Arrowheads are not placed on Road Guide Signs (RG) inside a national park.

Pathfinder and Boundary Signs display the Arrowhead along with the name of the agency (National Park Service) in an overbar that contrasts in color with the lower portion of the sign panel. Pathfinders are primarily used in urban, suburban, and populated rural areas along streets and roads with posted speeds of less than 45 mph. Boundary Signs mark the perimeters of NPS Sites. The NPS Arrowhead and typographic designations provide a consistent nationwide identifier that helps guide visitors through congested environments to a park's entrance(s).

3.2 Arrowhead Materials

Arrowheads may be manufactured in a variety of materials, methods, and colors, either as an integral part of the sign panel, or separately and affixed to the panel or to a masonry upright that is part of an overall sign structure.

The Arrowhead on Highway Guide Signs is to be cut from brown transparent overlay film with the rest of the panel graphics and applied to a white retroreflective background. Three-color vinyl Arrowheads affixed to the face of the sign are not recommended because of limited adhesion and colorfastness.

Arrowheads in the overbar of these signs are screen-printed NPS Brown on white reflective sheeting along with the dark green overbar. This screen-printed material is then applied to the sign panel.

Artwork for the Arrowhead is available from the UniGuide Program Manager.

3.3 Arrowhead Color Standards

Both a three-color (TC) and a one-color (OC) version are available. Guidance on when to use each is provided below. A color palette has been selected for reproducing the Arrowhead on NPS signs. These colors must never be changed or altered in any way.

4

Color Standards

4.0 Color Standards for Roadway Signs

Depending on application, colors are specified according to the Pantone Matching System (PMS) or to standard Federal Highway Administration (FHWA) highway sign colors. These colors will be matched and formulated for the respective type of manufacturing material. For other options in the use of color, contact the UniGuide Program Manager.

Highway Guide (HG) and Road Guide (RG) Sign panels are FHWA Recreation Brown with White legend. For Pathfinders (PF), the overbar is Dark Green with one-color NPS Brown Arrowhead logo on a White background and the main sign panel being FHWA Recreation Brown with a White legend.

Both FHWA Recreation Brown and FHWA white are retro reflective colors based on Federal Highway Administration standards. The Dark Green Pathfinder overbar and NPS Brown Arrowhead logo are screen-printed with transparent inks on reflective sheeting.

FHWA Red:
Traffic Regulatory (Stop,
No Entry, Prohibition)

FHWA Recreation Brown:
Sign Panel

NPS Brown: NPS Arrowhead
(PMS-1615)

FHWA White: Legend

FHWA Blue: Information &
Concessions Panel
Disabled Access

FHWA Yellow:
Warning Signs

Dark Green: Trialblazer
Overbar
(PMS-5605)

FHWA Black:
Regulatory Sign Legend

Colors for Roadway Signs use retroreflective FHWA Recreation Brown with the addition of the dark green NPS identity for Pathfinders, and use of FHWA Yellow to improve communications. Other FHWA colors apply for regulatory signs.

Road Guide with Advisory Panels

5

SEGD National Recreation Symbols

5.0 Introduction

Symbols provide a common, nonverbal language to transmit information to park visitors regardless of their native language. They also help affirm or clarify verbal instructions for visitors.

The original 83 symbols in the SEG D National Recreation Symbols were developed beginning in 1984 under a project sponsored by the US Army Corps of Engineers to create a visually consistent set of recreation symbols for public use. The system was subsequently expanded under a grant from the National Endowment for the Arts to the Society for Environmental Graphic Design (SEGD), and with support from the NPS, US Fish and Wildlife Service, Corps of Engineers and other recreation and land management agencies. The Corps has given program stewardship responsibility for the symbols to the SEG D.

The design of the SEG D National Recreation Symbols incorporates many of the pictographic concepts of the original NPS symbol program that was originally adopted in the late 1960's, and which had expanded from 12 symbols in the beginning to 88 symbols. In the end, there was little consistency in design and many of the symbols were not legible from required viewing distances. The new SEG D system was designed to be a more legible and visually consistent system. The basic design was graphically based on the style of the AIGA/USDOT Symbol Signs for Transportation Related Facilities, and incorporated 13 commonly used symbols from that system, but includes proportions and figure and field relationships that are tailored to signage.

This system includes 130 symbols in the positive format, excluding the recycle symbol (not part of the sign program), 63 prohibitions with a red circle and slash graphic over a white figure, and 21 warnings in a yellow diamond.

5.1 Use of Symbols

Although symbols are considered an international pictographic language, many park visitors may not be familiar with specific symbols, so legends occasionally must be added to affirm the messages, especially where activities are prohibited. In these instances the symbol is combined with words.

To determine whether or not a symbol sign would be appropriate for a specific use, the following criteria should be used:

- Does the symbol represent an accommodation, service or activity?
- Is the accommodation, service or activity obvious? The obvious should not be symbolized.
- Will the symbol be a substitute or reinforce a message? Symbols may be displayed alone, augment a worded legend, or dominate a legend.
- Will multiple symbols clutter a sign? Road and Highway Guide Signs with three or more word legends should not include symbols.

5.2 Symbol use on Roadway Signs

The SEG D National Recreation Symbols shall be used on all Roadway signs. Symbol use on all MUTCD Regulatory and Warning Signs that are placed on park roads shall comply with the latest version of the Manual on Uniform Traffic Control Devices (MUTCD) and the current edition of the Standard Highway Signs book. This includes: cross walks, horse crossing, deer, livestock, snowmobile, bus, truck, bike, or other symbols used specifically on regulatory and warning signs as specified for roads in the MUTCD.

5.3 Symbol of Access

The UniGuide Program has adopted the symbol of accessibility included in the SEG D National Recreation Symbols for clarity and consistency with all other symbols used in the standards. Actual application of the symbol including placement as a white figure in a blue rectangle is to be consistent with the Accessibility Guidelines and Standards of the US Access Board.

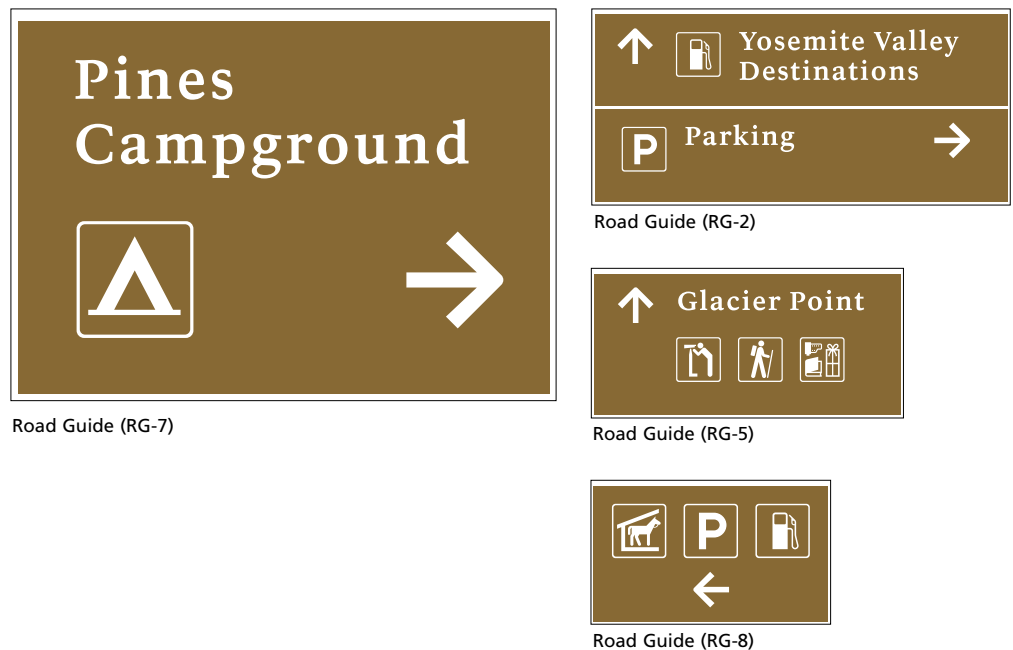

5.4 Type Size and Proportional Display of Symbol

Recreation symbol use will vary depending on application. In most applications, the size of the symbol (overall height and width of the border rectangle) will be in direct proportion to the size of the primary legend. See Grid formats in Chapter 3 for specific guidelines.

5.5 Symbol Colors

Refer to the examples provided in this manual for general guidance on the use of color. All positive symbols must be displayed with adequate contrast for legibility.

5.6 Roadway Signs with Recreation Symbols

Signs that incorporate symbols as an option include the following:

- RG-2** Road Guide for Single and Multiple Destinations with Symbols
- RG-5** Road Guide for Single Destination with 2 to 4 Symbols
- RG-7** Road Guide for Single Destination with 1 or 2 Symbols
- RG-8** Road Guide with 1 to 4 Symbols and Directional Arrow
- RG-9** Road Guide Information for Single Destination with Secondary Legend
- RG-10** Road Guide for Single Destination with Advance Guidance

5.7 New Symbols

The design of the symbols have been prepared with careful attention to proportion, detail and line weight for each application. Do not modify or augment the design of the SEG D National Recreation Symbols for any local purpose or change the relationship of the symbol to the surrounding shape. If the symbol is not appropriate for a specific communication requirement, contact the UniGuide Program Manager for assistance.

New symbols are selectively added to the SEG D National Recreation Symbol system based on careful review of need, and a determination that a symbol is an effective way to communicate the idea proposed. Requests for new symbols are to be directed to the UniGuide Program Manager for assistance.

5.8 Symbol Display

The 130 recreation symbols in the system are displayed on the following pages in six basic groups: General, Accommodations, Services, Land Recreation, Water Recreation, and Winter Recreation. Next to each symbol is its identification name and one to four icons showing the applicable formats for each symbol (recreation, prohibition, warning and highway). All symbols are shown in the recreation format. Note that not all symbols are intended for use on highway signs, with many symbols used only on trail, identification or general information signs viewed at close proximity. The prohibition format is displayed with the red slash placed behind the symbol. Research has shown that recognition and understanding is increased when the symbol graphic is not interrupted by the red slash. The 63 prohibition symbols, and 21 warning symbols are displayed on pages 2.5-18 through 2.5-20.

Note that in reproducing symbols in artwork, all symbols and borders must proportionally match one-to-one the sample artwork included in these specifications. When enlarging a symbol as an EPS file, check Maintain Uniform Scale within the software when assigning a proportion for enlargement or reduction.

5.9 Symbols Listed Alphabetically

Symbol name and number are listed below in alphabetical order.

If a symbol is also available in the prohibition format, a number is listed after the symbol name (PS-000). Where one symbol could be described by different names, options are listed; for instance, “caving” is also listed as “spelunking.” Symbols noted with an asterisk (*) can be used in a warning format using digital artwork provided.

The list includes only the most common prohibitions. Others are identified with the associated recreation symbol.

Directional Arrow

6.0 Introduction

Two styles of directional arrow graphics are used on signs in Roadway Signs. Which style is used depends on the application.

6.1 Arrow Artwork

The arrows are sized as a proportion of the primary legend size based on a transparent alignment box placed around the arrow. Arrows are placed on the sign grid by aligning the transparent box to the baselines as shown in the grid formats.

6.2 Arrow Type B

Arrow Type B is used on Road Guide Signs and Pathfinders.

6.3 Arrow Type C

Arrow Type C, the standard arrow specified in the FHWA Manual on Uniform Traffic Control Devices (MUTCD) is used on Highway Guide Signs.
